

Cartridge Codes

Making sense of your filter cartridge's code is easy – when you know how!

- The first letter(s) of the code indicate what the cartridge does. For instance, **N-25-SM** – the 'N' here, standing for nitrate removal.

C	Granular Activated Carbon
FL	Fluoride Removal Media
D	De-Alk Resin
F	Phosphates
N	Nitrate Removal Media
NS	Non-Silverised Ceramic
R	KDF Media
S	Silverised Ceramic
X	Activated Carbon Block

- The two middle digits of the cartridge code tells you its dimensions. For example, **N-25-SM** – the '25' here standing for length in cm. All cartridge lengths are measured in cm. Two sets of middle digits, i.e. **25-11**, indicate a length, followed by width – in this case, 25cm long x 11cm wide.

12	12cm
18	18cm
25	25cm
50	50cm
25-11	25cm long x 11cm wide
50-11	50cm long x 11cm wide

- The last letter(s) of the cartridge's code denote the type of 'mount' it uses.

SM	Short Mount 1/4" BSP Thread
FR, FR/1	Franke Triflow
FW	FreshWater
OE	Open Ended 2-2.5" FI Ports
LM	Long Mount 1/4" BSP Thread
JG	1/4" FI Speed-Fit Ports
3/8"	3/8" MI Spigot
