

Aquadome

(MPAD)

The Multipure Aquadome countertop unit provides all the taste and health benefits of Multipure filtered water, in a pleasant, white plastic dome. The Aquadome sits atop the counter and connects directly to the existing faucet. It is operated with a convenient diverter valve. Great for use in homes, apartments, RVs, boats, offices, health clubs, etc.

Benefits & Features

- Easy and convenient to use; provides delicious, clear, healthier drinking water whenever you need it.
- Better-tasting beverages - coffee, tea, juices, and drinks of all kinds.
- Use for food preparation, improving the taste of fruits and vegetables.
- Highest quality water for cooking - better pasta and sauces, soups, etc.
- Your pets will love it too!
- Guaranteed quality backed by an outstanding customer satisfaction guarantee and warranty.
- Cost-effective solution to meet your budget and replaces costly bottled water
- Attaches easily to your faucet without tools.
- Reliable protection for all of your family's drinking water needs.

Specifications

Housing Composition	Polypropylene Plastic
Diverter composition	Chrome-plated brass
Tubing	PVC
Inlet	3/8" Stem
Outlet	1/4" Stem
Replacement Filter	Model CB6AD
Approximate Capacity	750 Gallons*
Approx. Flow Rate	0.75 gpm @ 60 psi
Water Pressure	100 psi max/30 psi min
Weight (Basic Unit)	2.92 lbs.
Height	9.5 inches
Body Diameter	5.15 inches
Particulate Retention Size	Sub Micron (0.5 micron)
Housing Warranty	Lifetime

Filter life will vary in proportion to the amount of water used and the level of impurities in the water being processed. Claims of capacity are not applicable to contaminants reduced by mechanical filtration because of broad variations in the quality and quantity of physical matter in your drinking water. Your Multipure filter will clog, protecting you from these contaminants, and your flow rate diminishes. For contaminants reduced by adsorption, filter life/capacity is 750 gallons. It is recommended that the filter be replaced when the first of the following occurs: (a) annually, (b) the unit's rated capacity is reached, (c) the flow rate diminishes, (d) the filter becomes saturated with bad tastes and odors.
